

Action Path

Action Path is location-based survey platform for Android smartphones that crowdsources feedback from citizens in a way that fosters civic learning through reflective political practice. Existing platforms for civic engagement, whether online or offline, are inconvenient and disconnected from the source of issues they are meant to address. They require that citizens leave the places they normally inhabit physically or virtually and commit to a separate space and set of processes.

Action Path is designed to answer the challenge: How do you address barriers to effective engagement in community projects, and ensure all citizens can have their voice heard on how to improve their local communities? It does so by converting individual actions into collective action and by providing context and a sense of efficacy, which may help citizens become more effective through regular practice and feedback.
